EXPERIENCE

2023 – 2024 | AI ENGINEER (Computer Vision)

- Vietnamese Lip-Reading Model: Engineered a deep learning model based on the LipNet architecture to interpret Vietnamese idioms, achieving 65% accuracy on a custom-curated dataset.
- AI-Powered Body Measurement App: Developed a computer vision application using MediaPipe and OpenCV to automate body size estimation with an 80% precision rate.

2024 – 2025 | Data Analysis

- Quantitative Alpha Generation: Built a high-performance trading bot for VN30F1M futures, utilizing technical indicators and market sentiment analysis to generate a consistent 30% Alpha.
- Multivariate Forecasting Model: Designed a robust forecasting system for commodity production. The model processes multi-source datasets—including seasonal trends and global market variables—to reach an 85% prediction confidence level.

2024 – 2025 | Automation Developer

- Voice-Activated AI Assistant: Developed a personalized AI assistant featuring Speech-to-Text (STT) and Natural Language Understanding (NLU) to execute commands based on unique voice signatures.
- Automated Document Processing (IDP): Engineered an end-to-end pipeline to extract key data from Air Waybills (AWB) using OCR and NLP, automating data entry into the core system and reducing manual effort.

EDUCATION

2018 – Tran Dai Nghia High School for the Gifted

2022 – FPT University – Artificial Intelligence (AI)

SKILLS

- Computer Vision
- Python
- Machine Learning
- Natural Language Processing
- Tensorflow
- Data Processing
- Automation
