EDUCATION

2024 – FPT University
– Computer Science – Focus AI

AWARDS & HONORS

- **First Prize | App4Vsmart Competition | VinUni (2020)**
- **First Prize | South Vietnam Robocon Championship | Robocon Vietnam (2020)**

EXPERIENCE

01/2023 – 10/2023 | AI ENGINEER (Computer Vision)

- Vietnamese Lip-Reading Model:
  - **Project Description**: Developed a deep learning model based on LipNet to interpret Vietnamese idioms.
  - **Responsible**: Conducted core architectural research and managed the end-to-end deployment of the model for real-time inference.
  - **Technical**: 3D-CNN, Bi-GRU, CTC Loss, OpenCV, TensorFlow/PyTorch, Steamlit.
- AI-Powered Body Measurement App:
  - **Project Description**: Developed a computer vision application using MediaPipe and OpenCV to automate body size estimation
  - **Responsible**: Researched image-to-metric transformation algorithms and deployed the model to a production-ready environment.
  - **Technical**: MediaPipe, OpenCV, Python.

11/2023 – 06/2024 | Data Analysis

- Quantitative Alpha Generation:
  - **Project Description**: Developed a high-performance trading bot for VN30F1M futures.
  - **Responsible**: Researched alpha-seeking strategies and deployed the automated execution system with optimized latency.
  - **Technical**: Python, Pandas, Machine Learning.
- Multivariate Forecasting Model:
  - **Project Description**: Designed a forecasting system for commodity production.
  - **Responsible**: Researched multivariate time-series architectures and deployed the model for automated production forecasting.
  - **Technical**: Python, Pandas, Machine Learning.

06/2024 – 01/2026 | Automation Developer

- Voice-Activated AI Assistant:
  - **Project Description**: Developed a personalized AI assistant
  - **Responsible**: Researched voice biometrics and language processing workflows
  - **Technical**: Speech-to-Text (DeepSpeech/Whisper), Voice Recognition, Python, GeminiAI.
- Automated Document Processing (IDP):
  - **Project Description**: Engineered an end-to-end pipeline to extract data from Air Waybills (AWB) using Gemini API, automating data entry into core systems
  - **Responsible**: Researched Prompt Engineering for structured data extraction and managed the integration/deployment of the API-based pipeline.
  - **Technical**: Gemini API (LLM), Python, JSON Parsing, API Integration.
